

# Playing a bigger educational game

## Building Powerful Learners

### Schools investing in future generations

- Schools' curriculums are unapologetically designed to ensure students reach ever higher levels of achievement
- Today's learners are set to learn more complex knowledge, more precisely, at an earlier age... in order to thrive in an increasingly complex world
- BUT learners need more than to know what has gone before - they will need to generate what will come next
- **The challenge lies in delivery**

### + Building Learning Power ... nurturing both teacher and learner

- Interprets any school curriculum for a creative, compelling, unforgettable classroom experience
- Develops the attributes that characterise successful learners
- Uses a toolbox with tools and techniques that have a reputation for balancing curriculum content with the subtleties involved in strengthening effective learning behaviours
- Treats learning as a journey that is available to every student
- **Invites excitement and drives learning for life**

### = Aspiration, Ambition and Achievement open to all. Learners who:

- **fit happily and successfully** in the communities of tomorrow
- **innovate and move** freely across different fields and disciplines
- **understand themselves** as learners
- **relish challenge** and **seek new experiences**
- always **fulfil** their potential
- **are committed to learning for life**
